5 Citing RepeatsDB RepeatsDB in 2021: improved data and extended

RepeatsDB is a database of annotated tandem repeat protein structures. The database provides unit position, classification and reference to other databases. To start using RepeatsDB, please try the search box (top-right corner), the advanced search or the browse page.

IDs or free text

Search

Check our web server RepeatsDB-lite for interactive prediction of repeat units in protein structures.

RepeatsDB contains the following repeat classes:

Class		Description	UniProt	PDBs	PDB chains	Regions	Units	Example
1	Sleet Litte	Crystalline aggregates	0	3	3	3	0	-
2	×.	Fibrous repeat	21	39	86	86	393	P04115

Exercise 1. Examining repeat structures in repeatsDB

•Go to RepeatsDB: <u>http://repeatsdb.bio.unipd.it/</u>

•Click the "Search" tab, then search "Repeat unit number"

•Choose one example and write down the PDB name (e.g. 6yc3B).

•Check the assignment of the units. Is it correct? What about insertions? Are there mistakes? Write an evaluation: Looks good / one repeat wrong / many mistakes / total mess

Example

https://repeatsdb.bio.unipd.it/structure/5cxbB

- 1. looks good
- 2. one repeat wrong
- 3. many mistakes
- 4. total mess

Exercise 2. Viewing homorepeats in an alignment with dAPE

•Find a random human protein in **UniProt**. Make sure that it is a reviewed entry. Write the Entry Name.

Entry 🔺	Entry Name 🔺	Protei	n Names 🔺		Gene Names 🔺		Organism 🔺
P36888	FLT3_HUMAN	Recep kinase	tor-type tyrosine-pro FLT3[]	otein	FLT3, CD135, FLK	2, STK1	Homo sapiens (Human)
A0A010RCP6	A0A010RCP6_9	PEZI	mRNA cleavage and polyadenylation factor CLP1	CLP	1, CFIO01_00097	Colletotr	ichum fioriniae PJ7

Exercise 2. Viewing homorepeats in an alignment with dAPE

•Find a random human protein in **UniProt**. Make sure that it is a reviewed entry. Write the Entry Name.

•Copy the Entry ID (e.g. P10275).

•Go to the dAPE web page: <u>http://cbdm-01.zdv.uni-mainz.de/~munoz/polyx/</u>

•Use the Entry ID in option A

•Hit the "Report the evolution of its polyX" button

•Write down: (1) Which type of polyX has the human protein? (2) Which **additional** polyX not in the human protein were found in the orthologs?

Exercise 3. Find structures of short repeats

•Go to the PDB web page: https://www.rcsb.org/

•Go to Search > Advanced Search

•Type a short repeat in the Sequence Motif: as many repeats as possible; Use Mode PROSITE and RegExp (example: QQQQ / another example: [SP]SA[SP]SA[SP]SA)

•Click "count" to see if there are any cases

•Check the structure (3D View) to see if the repeat is in the structure (it could be disordered = absent)

•Write down the PDB name, RegExp and structure Example 3NB9 QQQQ alpha-helix Example 3FRC NNNN absent
